↓ -7.9 from last week

Status: Normal

Current Blood Pressure

124/81 mmHg

Status: Elevated/High

Current Blood Glucose

100 mg/dL

↑ 2.7 from last week

Status: Normal

AI-Generated Insights (Mock)

Based on your recent health metrics, your heart rate is generally stable, but we observed a slight increase in the last few days. Your blood pressure is currently within a healthy range. Blood glucose levels show a recent minor spike; ensuring consistent diet is recommended. **Recommendations:**

- Continue to monitor heart rate, especially if you notice palpitations or shortness of breath.
- Maintain your current lifestyle to keep blood pressure healthy.
- Focus on consistent meal timings and balanced nutrition to stabilize blood glucose. If spikes persist, consult your doctor.
